Prepared by the Trade Analysis Branch, Commercial Agriculture Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Joel L. Greene and Lilia E. George. Mrs. George also provides word processing and table formatting support. Editorial support is furnished by Martha R. Evans, Publications Services Branch, Information Services Division, Economics Management Staff. Data processing support is provided by Kenneth King and William Meiller, Information Technology Services, Information Services Division.

Foreign Agricultural Trade of the United States. Trade Analysis Branch, Commercial Agriculture Division, Economic Research Service, U.S. Department of Agriculture.

#### Digest

Agricultural Exports Totaled \$43.5 Billion in FY 1994 (see page 2)--U.S. agricultural exports for fiscal year (FY) 1994 (October 1993-September 1994) totaled \$43.5 billion. Strong exports in the fourth quarter (July-September) raised value above \$43 billion for the first time since record exports of \$43.8 billion in fiscal 1981. In 1994, bulk exports declined nearly \$1 billion to \$17.6 billion. High-value product (HVP) exports rose to a record \$25.9 billion, accounting for U.S. export gains.

Fiscal 1994 Ends With Record Agricultural Imports (see page 6)--Fiscal year 1994 (October 1993-September 1994) imports reached a record \$26.4 billion, \$1.9 billion higher than the previous year. Fourth-quarter agricultural imports were 16 percent higher than the fourth quarter of fiscal 1993, giving a year-end boost to import value. Coffee, grains, oilseeds, vegetables, fruits, and sugar advanced, while meats and fruit juices declined. In fiscal 1994, 31 percent of agricultural imports came from neighboring Canada and Mexico.

Import Share of Food Consumption in 1993 (see page 8)--The import share of food consumption reflects changing domestic supplies, relative prices for imported commodities, and changing consumer tastes and preferences. Compared with 1992, 25 of the 76 agricultural food imports included in the analysis had lower import shares of consumption in 1993 and 48 had higher shares. Three were unchanged.

U.S. Agricultural Trade Boosts Overall Economy (see page 11)--U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1993 stimulated another \$1.38 (the \$42.6 billion of exports in 1993 stimulated an additional \$58.7 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 768,000 full-time civilian jobs, including 460,000 jobs in the nonfarm sector. Farmers purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status. (Not all prohibited bases apply to all programs). Persons with disabilities who require alternative means for communication of program information (braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-5881 (voice) or (202) 720-7808 (TDD).

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, D.C., 20250, or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal opportunity employer.

## Agricultural Exports Totaled \$43.5 Billion in FY 1994

U.S. agricultural exports for fiscal year (FY) 1994 (October 1993-September 1994) totaled \$43.5 billion. Strong exports in the fourth quarter (July-September) raised value above \$43 billion for the first time since record exports of \$43.8 billion in fiscal 1981. In 1994, bulk exports declined nearly \$1 billion to \$17.6 billion. High-value product (HVP) exports rose to a record \$25.9 billion, accounting for U.S. export gains.

Bulk exports declined 5 percent to \$17.6 billion in fiscal 1994, and total bulk volume dropped 17 percent to 92 million tons. Sharply higher prices due to flood reduced production for corn and soybeans, and lower import demand for grains and soybeans, particularly grain in the former Soviet Union (FSU), dampened U.S. bulk exports.

Wheat exports declined 14 percent to 31 million tons, and value fell 15 percent to \$4 billion. The biggest decline was in shipments to the FSU which plunged over 50 percent to 2.2 million tons. Wheat shipments fell to Venezuela, India, and Morocco. The Philippines was a major growth market for U.S. wheat, as exports rose 34 percent to 2.1 million tons. The United States also increased sales to the Middle East 14 percent to 2.5 million tons.

High corn prices and competition from other exporting countries combined to decrease U.S. coarse grain exports 21 percent to 39.8 million tons. However, the 13 percent higher export unit value limited the value decline to 10 percent, from \$5.1 billion to \$4.6 billion. Coarse grain shipments to the FSU fell 49 percent to 2.7 million tons, as a shrinking FSU livestock sector continued to lower coarse grain import demand. Shipments to Japan were 16 percent lower at 13.7 million tons. U.S. corn exports to Portugal jumped from 306 to 434,000 tons as part of the Blair House agreement.

High soybean prices, tight supplies, and low foreign import demand, caused soybean exports to fall 20 percent to 16.4 million tons in fiscal 1994. Shipments to the European Union (EU), the largest market for U.S. soybeans, dropped 22 percent to 6.4 million tons because of higher EU oilseed production and increased grain use for feeding due to lower EU grain prices. Shipments also dropped to Asian markets, particularly Japan, Korea, Taiwan, Malaysia, and Indonesia.

Export gains for cotton and rice helped offset the decline in grains and soybeans. U.S. cotton exports rose 32 percent to 1.6 million tons, and value increased 50 percent to \$2.3 billion. Rice exports declined 10 percent to 2.4 million tons, however, sharply higher export prices pushed value up 16 percent to \$890 million. The United States shipped 518,000 tons of rice to Japan, making Japan the leading market for U.S. rice exports in 1994.

#### **HVP Exports Rise to Near \$26 Billion**

High-value product exports rose 8 percent to a record \$25.9 billion in fiscal 1994. Record sales of red meat, poultry meat, fruits, and vegetables accounted for much of the \$1.9-billion gain in HVP exports.

Vegetable exports rose 10 percent to \$3.5 billion, with most of the gain in frozen and processed vegetables. Frozen vegetable exports increased to \$313 million because of a strong 19-percent gain to \$186 million in frozen potato exports. There was strong growth in the highly prepared vegetable category, which includes commodities such as potato chips, tomato sauces, and prepared vegetable foods, as exports increased 17 percent to \$1.6 billion. Canada was the largest market for U.S. vegetables with imports of \$1.2 billion, including \$626 million in fresh vegetables. The United States shipped a record \$598 million worth of fresh and processed vegetables to Japan. Fresh vegetables totaled \$146 million; the main fresh vegetables shipped were asparagus, broccoli, and cauliflower. The United States also exported record levels of vegetables to Taiwan (\$136 million) and Hong Kong (\$132 million).

Fruit exports rose 11 percent to \$2.5 billion, led by strong gains in fresh deciduous fruit shipments. Deciduous fruit exports increased 21 percent to \$1.3 billion, and volume rose even more, up 25 percent to 1.6 million tons. Mexico, Japan, Taiwan, and Southeast Asia were major markets for fresh U.S. apples, berries, grapes, and pears.

The value of U.S. beef exports rose 6 percent to a record \$2.2 billion. The volume of beef exports increased a strong 15 percent to a record 494,000 tons, but lower beef export prices limited value gains. Japan was the largest market with imports of 266,000 tons valued at \$1.3 billion. Increased beef consumption in Japan and the strong yen relative to the dollar, pushed exports higher. There were also substantial gains to Mexico, Taiwan, and

Korea. The value of beef exports to Canada remained unchanged, although volume rose 9 percent to 90,000 tons.

The United States exported a record 172,000 tons of pork, valued at \$525 million in fiscal 1994. Japan was the leading market for U.S. pork at 83,000 tons valued at \$348 million. There weresubstantial gains to Mexico, up from \$61 million to \$84 million, and the FSU, up from \$850,000 to \$29 million.

The United States exported a record 1.4 million tons of poultry meat valued at \$1.4 billion, both

volume and value gained nearly 50 percent compared with 1993. U.S. exports were boosted by strong world demand for poultry meat and competitively priced U.S. products. Poultry meat exports increased because of record shipments to the FSU and strong gains to Hong Kong and Mexico. U.S. exports to the FSU jumped from \$27 million to \$282 million because of increased demand and the expansion of private marketing channels in the FSU for food items. Exports to Hong Kong rose 44 percent to \$231 million. (Joel Greene, Trade Analysis Branch, 202-219-0816)

## Fiscal 1994 Ends With Record Agricultural Imports

Fiscal year 1994 (October 1993-September 1994) imports reached a record \$26.4 billion, \$1.9 billion higher than the previous year. Fourth-quarter agricultural imports were 16 percent higher than the fourth quarter of fiscal 1993, giving a year-end boost to import value. Coffee, grains, oilseeds, vegetables, fruits, and sugar advanced, while meats and fruit juices declined. In fiscal 1994, 31 percent of agricultural imports came from neighboring Canada and Mexico.

#### Noncompetitive Imports Gain

Noncompetitive imports gained 12 percent to end at \$6.2 billion in fiscal 1994. Coffee accounted for most of the gain, advancing 33 percent to \$2 billion, in spite of a volume decrease of 200,000 tons. Coffee unit values jumped 64 percent to \$2,084 per ton as production in Brazil was curtailed due to frost. Facing low stocks, roasters were forced to import coffee at high prices.

Cocoa imports rose 5 percent, reaching just over \$1 billion and spices increased 19 percent to \$300 million. Banana import value was steady at \$1.1 billion in spite of a 3 percent increase in volume to 3.8 million tons. Rubber imports also showed only a slight change, gaining 5 percent in value to \$885 million as volume edged up to 1 million tons. Tea imports were valued at \$700 million, unchanged from last year.

#### Competitive Imports At Record High

Competitive imports rose 7 percent to \$20.2 billion in fiscal 1994. The flood-ravaged 1993 U.S. grain and oilseed crop caused Canadian shipments of wheat, feed grains, and oilseeds to rise due to poor growing conditions in 1993. Beef imports declined slightly, and cattle shipments were down due to high U.S. herd numbers. Pork imports increased 12 percent to \$744 million on higher shipments from Denmark and Canada.

Total grain, feed, and grain product shipments rose 44 percent to \$2.3 billion in fiscal 1994. Volume jumped from 4.9 million tons to 10 million tons. Wheat imports increased 92 percent to 2.8 million tons and barley rose 947 percent to reach 2 million tons. Oat imports doubled to 2 million tons. Canada shipped 86 percent of total U.S. bulk grain import volume.

Oilseed and product imports gained 23 percent for a total of \$1.5 billion in fiscal 1994. Oilseed volume was up 28 percent to 3.2 million tons. Large rapeseed supplies in Canada fueled U.S. imports for crushing. Soybean shipments from Canada also gained. Vegetable oil imports rose 11 percent to \$1.1 billion because of higher oil prices due to lower world production. Import volume gained only 5 percent to 1.6 million tons on higher palm and rapeseed oil shipments.

Horticultural imports gained 6 percent in fiscal 1994, totaling \$7.3 billion. Total fruit shipments to the United States were \$1.5 billion. Fresh and frozen fruits jumped 27 percent to \$951 million, with imports from Mexico and Chile each accounting for about a third of the total. Fruit juice imports approached \$700 million as orange and apple juice volume rose.

Vegetable shipments showed slight gains. Value rose 8 percent to \$2.6 billion for vegetables and preparations. Mexico provided 70 percent of the 2.2 million tons of fresh and frozen vegetables imported. Tomato, onion, and cucumber import value rose.

Nut imports were dominated by pecans, cashews, and coconut meat. Volume was steady and value decreased slightly. Nut imports totaled 193,000 tons valued at \$477 million. Wine and malt beverage imports increased 7 percent to \$2.1 billion, with a 15-percent increase in volume to 15 million hectoliters. Beer accounted for most of the gain. Sugar and sugar product imports also gained in fiscal 1994, reaching \$1.1 billion. Cane and beet imports were valued at \$600 million on volume of 1.6 million tons, up slightly from last year. Tobacco leaf imports fell 17 percent to 318 million tons. Limits on foreign leaf content in U.S. produced cigarettes held imports down.

#### Canada and Mexico Were Leading Import Sources

In fiscal 1994, 31 percent of total U.S. agricultural imports came from neighboring Canada and Mexico. Canada continued to be the main source of agricultural imports, accounting for 20 percent of value. Canadian shipments to the United States totaled \$5.2 billion; 25 percent were grains and feeds, 15 percent were meats, and 15 percent were live cattle. The value of Canadian shipments to the United States was up 18 percent this year due to increases in grain, notably wheat, and oilseeds and oil, primarily rapeseed and rapeseed oil.

Mexico followed Canada at \$2.8 billion; 11 percent of total U.S. agricultural import value. Vegetables made up 39 percent of Mexican export value to the United States, and cattle comprised 14 percent. Tomatoes, onions, cucumbers, and cauliflower were the primary vegetables shipped.

Fruits, dominated by melons, mangos, and bananas, accounted for 13 percent. Coffee was 11 percent of imports, and beer accounted for 6 percent of Mexico-to-U.S. trade. (Tom Capehart, Trade Analysis Branch, 202-219-1262)

#### Import Share of Food Consumption In 1993

The import share of food consumption reflects changing domestic supplies, relative price for imported commodities, and changing consumer tastes and preferences. Compared with 1992, 25 of the 76 agricultural food imports included in the analysis had lower import shares of consumption in 1993 and 48 had higher shares. Three were unchanged.

The import share of food consumption shows how much of the U.S. food supply is produced domestically and what portion comes from other countries. It is both an indicator of U.S. dependence on other countries for certain food items and a measure of the diversity of our diet. When a large part of the food supply is imported, less control over the production and marketing process occurs. However, it also means a greater variety of foods can be consumed. In some cases, the seasonality of certain vegetables and fruits is no longer a constraint to consumption as imports maintain the supply during the domestic offseason. Tropical products such as tea, cocoa, and palm oils, and other products not produced in the United States (noncompetitive products), have an import share of consumption of 100 percent. Most food products, however, are produced domestically and imported.

#### Methodology

Table 6 shows the import share of consumption for various commodities. Import shares are calculated by dividing the quantity imported by food disappearance. Imports not consumed as food may overstate import share. For instance, imported grains may be used as feed rather than in food products. However, the import share of consumption is underestimated to the extent that some commodities are imported as components of processed products, such as the pasta or meat contained in prepared dinners. Also, sweeteners in baked, frozen, or other foods are not included in sweetener imports.

#### **Animal Product Imports**

The import share for red meat consumption rose from 7.4 percent in 1992 to 7.6 percent in 1993. A slight increase in imports and a decrease in U.S. consumption caused the import share to rise. Beef's import share declined slightly while pork and lamb import shares both gained.

Dairy consumption, especially cheese, was on the rise in the United States, and increased imports pushed the import share of consumption to 1.9 percent for 1993. Dairy import consumption is low relative to many other products because fluid milk is too bulky to ship far. But cheese consumption rose 2 percent in 1993, and imports advanced 12 percent, pushing the import share for cheese to 4.7 percent.

#### **Grain Imports**

Grain imports surged in 1993 and import share consequently rose for all major grain categories. Wheat imports rose 13 percent to 1.5 million tons due to record shipments from Canada. Import share rose to 12.1 percent. In spite of slightly declining oat imports, share increased from 51.3 percent to 95.6 percent as oat consumption in the United States rose slightly and production fell by almost a third. High quality oats from Canada and Finland accounted for most imports. Import shares increased for rye, rice, corn, and barley. Wheat flour's share rose to 1.4 percent as import quantity almost doubled.

#### **Horticultural Imports**

Total vegetable import value increased 15 percent in 1993 due to increased imports from Mexico. The import share of consumption for fresh vegetables rose from 7.1 to 9.9 percent. Tomatoes and broccoli made significant gains. Garlic imports from China surged, causing the import share to rise to 29 percent. Lettuce, cucumbers, peppers, onions, and cabbage also gained import share, but carrots declined. Import shares for processing vegetables are generally lower than for fresh vegetables. Except for broccoli, which peaked the previous year, vegetables for processing all gained import shares. Broccoli, cauliflower, and peppers had the highest import shares.

Fruit import share of consumption declined slightly in 1993, reflecting lower imports, especially of apples and grapes. Import shares decreased because of abundant domestic production. Consumption increased slightly for most fruits. Banana's import share is 99.8 percent because a small quantity is produced in Hawaii. Tree nut import share declined as imports fell 9 percent and domestic production increased. (Tom Capehart, Trade Analysis Branch, 202-219-1262)

Data on import share of consumption is available for 1992 in the USDA publication "Food Consumption, Prices, and Expenditures 1970–93," December 1994. However, the data in table 6 for vegetable oils were calculated from data published in the 1994 Oil Crops Situation and Outlook Yearbook.

- 1/ Excludes game fish consumption.
- 2/ Includes cultivated catfish.
- 3/ Excludes the nonfish content of canned fishery products.
- 4/ Milk equivalent of all dairy products calculated on a milkfat basis.
- 5/ Natural equivalent of cheese and cheese products. Includes all types of cheese except full-skim American and cottage, pot, and baker's cheeses.
- 6/ Olive oil imports.
- 7/ Includes palm kernel oil, palm oil, and coconut oil.
- 8/ Includes almonds, Brazil nuts, cashews, chestnuts, filberts, Macadamias, pecans, pignolias, and walnuts.
- 9/ Includes apricots, avocados, cherries, cranberries, nectarines, peaches, pears, pineapples, plums, prunes, strawberries, papayas, and miscellaneous fruits.
- 10/ Flour and other grain products included, grain equivalent.
- 11/ Includes flour equivalent of macaroni products.
- 12/ Kona coffee, grown in Hawaii, accounts for about 0.1-0.2 percent of total U.S. coffee consumption.

## U.S. Agricultural Trade Boosts Overall Economy

U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1993 stimulated another \$1.38 (the \$42.6 billion of agricultural exports in 1993 stimulated an additional \$58.7 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 768,000 full-time civilian jobs, including 460,000 jobs in the nonfarm sector. Farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

U.S. agricultural export value remained practically unchanged in calendar year 1993 from 1992 levels (\$42.9 versus \$42.6 billion). Production from more than a third of U.S. cropland moved into export channels. The United States exported an estimated 55 percent of wheat, 43 percent of rice, 35 percent of soybeans, 18 percent of corn, and 32 percent of cotton in fiscal year (FY) 1993 (October 1992-September 1993).

U.S. agricultural exports peaked in 1981 at \$43.3 billion after years of steady growth, but then declined 33 percent by 1986. As in 1992, 1993's agricultural exports neared the record 1981 current dollar value. Bulk and processed agricultural exports provided employment for 1.2 million workers in 1981. Employment from agricultural exports in 1993 required 768,000 workers. Exports in 1981 generated \$106.3 billion in business activity: \$43.3 billion for exports and \$63 billion for supporting activities. Exports in 1993 generated \$101 billion in business activity: \$42.6 billion for exports and nearly \$59 billion for supporting activities. Thus, each dollar received from agricultural exports produced a multiplier effect of more than 2. Net exports in 1993 contributed \$17.6 billion to the U.S. trade balance, a decrease from the \$18.3 billion in 1992.

#### Exports Generate New Businesses, Add Jobs

The United States exported \$42.6 billion of agricultural products in 1993. The value of exported raw products was \$17 billion; processed commodities, \$16.8 billion; and transportation and trade services for raw and processed products, \$7 billion. The nearly \$59 billion in 1993 supporting activity included \$15.3 billion from the farm sector; \$4.8

billion from the food processing sector; \$13.1 billion from other manufacturing sectors; \$7.7 billion from trade and transportation; and \$17.7 billion from other services. Nonfarm sectors of the economy received about 74 percent of the additional economic activity.

Employment required to support 1993's agricultural exports was at its lowest level since this series began in 1984. Many different factors, (increased labor productivity, export commodity mix, sectoral price changes, etc.), may have contributed to this effect. Of the 768,000 full-time civilian jobs related to agricultural exports, more than 308,000 U.S. farmworkers and 10 percent of the farm labor force worked in the production of export commodities. In addition, 460,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 69,000 of these were in food processing, 172,000 in trade and transportation, 68,000 in other manufacturing sectors, and 152,000 in other services.

#### **Bulk Exports Continue To Decline**

Maintaining a trend begun in 1990, bulk agricultural exports (grains, oilseeds, and cotton) held the minority share of the export mix. Non-bulk (fresh fruits and vegetables, semi-processed and high value processed) products were worth more in the \$42.6 billion mix of agricultural exports in 1993. High value agricultural exports accounted for \$25.6 billion, or 60 percent of all direct exports.

Bulk exports have a smaller proportional effect on the nonfarm economy than processed exports. Direct bulk exports generated an additional \$17.3 billion of business activity while direct non-bulk exports generated an additional \$41.4 billion (\$1.02 additional output per dollar of bulk exports compared with the \$1.38 for all agricultural exports and \$1.61 for high value exports).

The additional business activity attributable to bulk exports was distributed differently across economic sectors (10 percent to farming, 29 percent to manufacturing, 47 percent to other services, and 14 percent to wholesale trade and transportation) than the additional business activity for high value agricultural exports (33 percent to farming, 31 percent to manufacturing, 23 percent to other services, and 13 percent to wholesale trade and transportation). Of the 768,000 jobs related to U.S. agricultural exports, 505,000 (66 percent) supported non-bulk exports.

#### Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially through the 1970's. Net U.S. agricultural exports (exports minus imports) rose to \$27 billion in 1981 from about \$1 billion in 1969. Net agricultural exports of \$17.6 billion partially offset a \$153 billion deficit in nonfarm trade in 1993, leaving the U.S. trade balance in deficit by \$136 billion.

#### The Effect of Agricultural Imports on U.S. Output

The United States imported \$25 billion in agricultural commodities in 1993. Some \$5.6 billion was spent on items such as bananas, coffee, and tea, that did not compete directly with U.S. agriculture. The balance of \$19.4 billion was spent on imports (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that compete with U.S. products.

Since 1988, noncompetitive farm product imports have been declining at an annual rate of nearly 2 percent. Competitive agricultural imports are moving in the opposite direction, growing annually by 5 percent. Only competitive imports were included in the input-output (I/O) analysis of the effects of imports on the economy.

Using the I/O model, we estimated that the equivalent domestic output effect of the \$19.4 billion of competitive imports in 1993 was \$48 billion. That is, each dollar spent on imports would have required roughly another \$1.48 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.48.

### Stimulating the U.S. Economy Through Agricultural Trade

Almost all of the positive trade balance or direct benefit comes from bulk agricultural exports. The port value of other agricultural exports and total imports just about offset each other (table 7). The additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The economywide 1993 net business surplus for agricultural trade was an estimated \$47.7 billion, a result of \$101.3 billion of total output generated by farm exports minus \$53.6 billion stimulated by agricultural imports (including noncompetitive imports).

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$32.3 billion of output associated with agricultural exports more than doubled the \$13.7 billion of farm output implicitly lost because of competitive agricultural imports. All manufacturing, including food processing sectors, gained \$16.5 billion in total output, about 60,000 jobs and \$4.2 billion in income.

Some industrial sectors were examined for their net gain or loss due to trade. It was found that in terms of income, employment, and output, trade benefitted the meat, grain, fat and oil processors, (except miscellaneous vegetable oils), processors, confectioners, and miscellaneous food industries. Agricultural trade was not beneficial to domestic cheese processors, wine and malt beverage makers, sugar processors, canners, and bakers.

The U.S. economy outside of farming and food processing directly accrued a net \$4.3 billion from agricultural trade and a net increase in output of \$25.8 billion after considering the output lost to competitive agricultural imports.

#### Nonfarm Sector Receives Most Income Effects

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in 1993 generated \$2.38 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes.\(^1\) Thus, the \$42.6 billion of agricultural exports in 1993 generated \$104.6 billion of total economic activity, including \$42.6 billion of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The I/O analysis used in this article enables researchers to determine the impacts of imports on the economy had they been domestically produced. The following descriptions of income from

<sup>1</sup> This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. More purchasing power is spread throughout the total economy. The heightened activity, trade, and transportation can boost investment in plants and equipment. Because I/O analysis does not consider this additional spending, our estimates of the economywide influences of agricultural trade are conservative.

imports is income which would have been realized had those commodities been produced in the United States.

In 1993, the share of total income attributed to agricultural exports and competitive imports to the onfarm sector was 69 percent and 74 percent. respectively; with nonfarm, nonfood sectors of the economy receiving 58 percent of income from agricultural exports and 58 percent of the income effects attributed to competitive imports. The distribution of the income remaining within the farm and food processing sectors differed markedly. The farm sector received 31 percent of total income from agricultural exports, while the food processing sector received 11 percent, reflecting the importance of raw agricultural commodities in the export bill of goods. The total income effect of competitive imports (a lower level than exports) was less pronounced between the farm and food processing sectors, with the food processing sector at about 16 percent and the farm sector generating about 26 percent of all import income effects, reflecting the greater importance of processed food products in the competitive import bill of goods.

#### **Recent Data Revisions**

The analysis in this article differs from that in last year's (1993) September/October Foreign Agricultural Trade of the United States (FATUS). Last year the results described in the article were based on the ERS trade impact model derived from the U.S. Department of Commerce, Bureau of Economic Analysis (BEA), 1982 Input-Output tables. This article incorporates data and tables published by BEA in its 1987 benchmark input-output accounts.

Table 7 shows 1992 results, the results that would have occurred were they run with the updated model, and the 1993 results. The decrease in economic activity between 1992 and 1993 highlighted in table 7 is more a result of better data and information rather than an actual drop in employment or income. This analysis does not include additional spending that may result from higher levels of income, so these estimates of economywide influences of agricultural trade are conservative. (William Edmondson, Rural Industry Branch, Rural Economy Division, 202-219-0777)

## New Report Describes History of Land Tenure in Central and Eastern Europe

October 1994

Contact: Robert Koopman, 202/219-0621

raditionally, land tenure patterns in the seven Central and Eastem European (CEE) countries of Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, and former Yugoslavia have included small farms and large state and collective farms. The economic reform process underway in these CEE countries allows some changes to traditional land tenure patterns. CEE governments are more likely to reestablish an agricultural tenure system based on small individual holdings if the pre-World War II population perceived itself as a peasantry. This self-perception was strongest in countries where feudal agricultural tenure was the least transformed into modern, commercial farming before collectivization, which organized farms under collective control.

Familiarity with landownership pattems in the region before and during the period of socialist rule provides a basis for understanding why land privatization and compensation policies that are practical in one country are not acceptable or effective in another. Central and Eastern European Land Tenure Patterns: A Brief Historical Overview, a recent report from USDA's Economic Research Service, reviews the history of land tenure patterns in these seven CEE countries.

The basic aims of land reform policies in the CEE region have differed from country to country depending largely on whether or not rural pressure for land distribution was strong. The earlier historical appearance of small-farm tenure in Czechoslovakia, Hungary, Poland, and former Yugoslavia has evolved into less rural pressure for transition to a more small-farm-based agricultural system. These areas tend to have farming populations with less hunger for land. In contrast, the farming populations of Albania, Bulgaria, and Romania show greater enthusiasm for small peasant farms. Their governments have accommodated them with legislation aimed at more definitively breaking up the large state and collective farms of the socialist period. The connection with past tenure patterns in this second group of countries is that there was only a short period of smallfarm tenure prior to the land collectivization of the Communist period. This short period of small-farm tenure did not satisfy the rural population's desire to farm their own land

In the countries where tenure patterns evolved away from feudal arrangements beginning in the mid-19th century (Czechoslovakia, Hungary, Poland, and former Yugoslavia), agricultural laborers tied to estates became independent peasants focusing on self-sufficiency. Many peasants then evolved further into small-farm operators who were commercially oriented and later able to expand their holdings. Other peasants became wage laborers or tenant farmers. By the early 20th century, a large share of the agricultural land in these countries belonged to small, commercially oriented farmers whose families had an established history of private tenure. The aspirations of a significant part of the rural population to become independent farmers were largely fulfilled. By the time these countries became Communist after World War II, their rural populations were well acquainted with farming their own lands. In these countries, there is currently little pressure to institute a landtenure system based on increasing numbers of small farms.

### **SUMMARY OF REPORT AER-700**

# U.S. Rice Exports Continue High, as Domestic Use Surges

October 1994

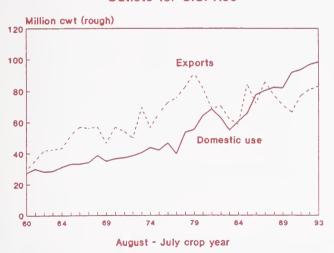

Contact: Parveen Setia, 202-501-8515

orld demand for U.S. rice remains high, and domestic use is rising as well. Consistent with previous years, the United States is expected to rank second among world rice exporters in 1994, behind Thailand. The United States supplies nearly 17 percent of the world market. World rice trade in 1994 is expected to total a record15.5 million tons. Japan's decision to import rice from the United States, Thailand, and China in late 1993, after a shortfall in its production, explains much of the large increase in world rice trade.

A new report by USDA's Economic Research Service, *The U.S.Rice Industry*, reviews all aspects of the industry, including supply, demand, prices, Government programs, rice quality, the marketing system, and trade.

In recent years, the United States has been exporting nearly half its rice crop, or 70 to 80 million cwt, with the rest used to satisfy the domestic market. By contrast, from 1960 to 1990 the U.S. rice industry exported about 60 percent of its production.

#### Outlets for U.S. rice

Domestic consumption now accounts for over half of the total use, up from 40 percent in 1980/81. It has grown faster than the population rate, thus providing millers a viable market. Per capita consumption of rice is rising at the rate of about 1 pound per year and currently stands at more than 22 pounds.

A rise in the U.S. Asian and Hispanic populations has been a major factor in increased domestic demand for rice. Health benefits associated with increased consumption of rice, which is free from sodium, fat, and cholesterol, have played a key role in raising domestic demand as well.

The introduction of several quick cooking rice dishes, such as boil-in-the-bag items and microwavable dishes, has further encouraged domestic consumption. The rice industry has highlighted both the nutritional value and convenience of rice in its marketing efforts.

Rice use in processed food is the fastest growing category. Processed food use includes such products as breakfast cereals, pet food, package mixes, candy, soup, baby food, crackers, rice pudding, confectioneries and snack items, cooking batters, and desserts.

## USDA Outlook Forum February 22-23, 1995

USDA is planning a 2-day forum on issues affecting the economic outlook for U.S. farmers and food and fiber industries through the year 2000. Top administration officials and industry leaders will discuss agricultural policy prospects and policy issues for 1995 and beyond.

Call Ray Bridge at (202) 720-5447 for additional information or to request registration information.
